Subject: Eco-Schools USA now is up and running -- take a look (T)

Dear colleagues:

We officially started the Eco-Schools USA Program this week and are asking for your help in spreading the word.
<http://www.nwf.org/ecoschools/index.cfm>

It is the new U. S. component of an international network of 30,000 schools in 43 nations.

Our new website makes Eco-schools USA registration simple for individual schools and we are also seeking opportunities to join up with other green school programs evolving across America . The feedback we have received from discussions with such program leaders points to interest in mutually supportive partnerships.

The Eco-Schools USA goals are simple: 1) green the school buildings, 2) green the school grounds, and c) green the educational programming at registered schools.

The program encompasses a rich set of educational "pathways" such as energy, water, green hour outdoors and climate change -- and we have some terrific new partners including SchoolTube.com, Facing the Future, Al Gore's Climate Project, and the HSBC climate initiative.

Please take a moment to examine the site -- cruise the pathways and features and let us know what you think, whether you would like to get involved and what improvements and collaborations you would recommend.
<http://www.nwf.org/ecoschools/index.cfm>

We look forward to hearing from you.

Thanks and best wishes,

Kevin C.
